

For the first time in history, a war takes place in a country with nuclear power plants. In war zones, they pose immense additional threats not only as strategic targets but also as accidentally bombarded objects.

Are you aware of the fact that if the electricity and water supply of the cooling and storage ponds of fuel rods is interrupted, these radioactive materials catch fire and enormous amounts of radioactivity will be released?

What do you consider a safe and stable energy?

Nuclear energy with its unimaginable potential dangers cannot be considered sustainable or green. The taxonomy loses all its meaning and credibility if it integrates nuclear energy.
